This web application is for students of any colleges or universities. The students can register an account, and use that account to track their grade progress for a course. On their dashboard they can add as many courses as they like. Each course can be edited to allow students to add their assignments and other graded materials, and set goals on what mark they are trying to achieve for each assignment/graded materials. The students can also input their real grades on the assignments, and compare it to their set goals. Each course can calculate what mark you'll need on assignments that has not been graded yet in order to get an A+, A, A-, B+, B, B-,... as your final mark. Students can upload files such as pdf to the website that can only be managed by the person who uploaded it. You can download or delete these files. As an option, the students can add teachers in their courses and rate them on how well they teach. There will be an admin account that can use all the features plus keep track of number of users, number of users that achieved their goals, number of files uploaded, and traffic of the website. This website will inform students that no illegal files may be uploaded, and accounts may be deleted after a certain time due to inactivity.

The expected result is that students can keep track of their courses, upload files for their personal use, and set goals for their assignments and courses final grade.
