Summary for Week 5

During this week, we were very productive. Since we have already done the mockup, we copied the design of what we have there and made it into html form (it was Keefe's part/idea to do some design editing to the website to make it more "nice"). Once we have that done (only took about a day or so), we finalized the tables and schema for the database part. Now, we started to plan out how we are going to do the php part of the assignment into the website. We already have an idea, but we are starting to plan out how to finalize this part. At the last few days, we started to do some part of the php, and design it into the html part of the website.
