Summary for Week 6

During the final week, we had MANY problems. Since we also had many other group project due on the same day, we had to rush a lot of things for all of the group project. We were smart enough to be in the same group for all 3 of the group projects that we needed to do, but that is where the problem happened. Since we were almost done PHP, we brushed it off to the side and focus on the other group project that we BARELY started on and this lead to many problems in the end. Our other all goal was to finish PHP by Wednesday and get everything ready for the presentation but, we finished everything that needed to be done for PHP on Friday. This was REALLY bad because we had to basically rush the project itself even though it was already 95% done. The other 5% that we rushed may lead to SOME bugs that is really easy to fix. Over all, this week was really frustrating but yet a major learning curve.
